Fill In The Blanks For Geography

1. The plants and animals that are found in a particular location are referred to as an \_\_\_\_\_.
2. Disruptions to an ecosystem can be disastrous to all \_\_\_\_\_ within the ecosystem.
3. When a new organism is introduced it competes with the natural organisms from that location for available \_\_\_\_\_.
4. The unnatural strangers can push other organisms out, causing them to become \_\_\_\_\_.
5. Throughout the history of the Earth, the delicate balance found within ecosystems have been disrupted by natural disasters such as \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_, and volcano eruptions etc.
6. As geographers study the ecosystems around the world, many patterns become evident from one ecosystem to another. Which allows scientists to group ecosystems into categories called \_\_\_\_\_.
7. The most commonly accepted biomes that exist on the Earth are \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_, Tropical Rain Forest, Deciduous Forest, and Coniferous Forest.
8. The frozen cold ecosystems found near the Northern most parts of the Earth are called \_\_\_\_\_.
9. The Earth's tundra's are home to a variety of specialized plants and animals that have adapted to survival in brutal \_\_\_\_\_.
10. Animals such as \_\_\_\_\_, \_\_\_\_\_ bears, arctic \_\_\_\_\_, and arctic \_\_\_\_\_, are a few of those and they usually have white fur, in order for them to blend in with the snow.
11. Animals that live in desert biomes have become adapted to surviving on little \_\_\_\_\_. Some plants and animals can actually store water within their bodies.
12. Due to there being fewer resources available, there are generally smaller concentration of life forms in a \_\_\_\_\_ than in other biomes.
